

Six Sigma

Six Sigma performance is the statistical term for a process that produces fewer than 3.4 defects per million opportunities for defects.

Six Sigma improvement is when the key outcomes of a business or workplace are improved dramatically.

Six Sigma organizations use Six Sigma methods and tools to improve performance.

SJSU Six Sigma Badge

6σ

The revolutions in lean manufacturing and quality have swept the world and broadened into the disciplines of lean enterprise and six-sigma. Six Sigma's emphasis is on improving existing capabilities. Six Sigma is a set of structured methodologies, problem-solving tools and advanced statistical methods for analyzing and improving processes, product designs and services on a broad range of metrics, especially cost, quality, time and variability. It moves beyond treating symptoms and short-term problems to the elimination of root causes, thereby emphasizing lasting improvement. To be effective, lean enterprise and Six Sigma require a guiding infrastructure of business strategy, business planning, enterprise leadership, program management, and team management. It also relies on a supporting infrastructure to enable change management and workforce training and development.

Students who acquire Six Sigma skills are extremely marketable in Silicon Valley's. Hence, the ISE department now offers a SJSU Six Sigma Certificate. The certificate is conveniently available to the ISE graduate students and local professionals, and it is inexpensive when compared to certifications offered by professional societies. Also, ISE graduate students specializing in the area of Production and Quality Assurance can fulfill the requirements of the SJSU Six Sigma Badge as part of their MS degree requirements.

Requirements for a Green Belt Badge

Completion of ISE 250 - Leading the Six Sigma Improvement Project with a grade of B or better.

Requirements for a Black Belt Badge

Satisfaction of a Probability and Statistics Prerequisite, such as ISE 130 or its equivalent.

Completion of each of the following courses with a grade of B or better:

ISE 202 – Design and Analysis of Engineering Experiments

ISE 235 - Quality Assurance and Reliability

ISE250 - Leading the Six Sigma Improvement Project

ISE 251 - Orchestrating the Lean Enterprise Improvement Program
Completion of real-world projects in ISE 202 and ISE 250. A joint project can be completed if a student enrolls in ISE 202 and ISE 250 concurrently.

Completion of an open book exit exam with a passing grade of 75%.
