

**San José State University**  
**College of Science / Department of Computer Science**  
**Introduction to Database Management Systems, CS157A, Summer 2020**

**Course and Contact Information**

<b>Instructor:</b>	Dr. Mike Wu
<b>Office Location:</b>	MacQuarrie Hall 211(Online)
<b>Email:</b>	Ching-seh.Wu@sjsu.edu
<b>Class Days/Time:</b>	Tuesday and Thursday 1:00pm ~ 3:00pm (Online)
<b>Office Hours:</b>	Tuesday & Thursday 4:00pm ~ 5:00pm (Online) <b>(Please drop me email with time info and subject.)</b>
<b>Classroom:</b>	Online
<b>Prerequisites:</b>	CS 146 Data Structures and Algorithms (with a grade of "C-" or better); Computer Science, Applied and Computational Math major.

**Course Description**

General: Current, classical database systems. Entity-relationship and enhanced entity models. Relational model, algebra, calculus. Current, emerging SQL standard. Embedded, Dynamic SQL. Application perspective on transactions and security. Interactive and programmatic interfaces to database systems. Application programming project using commercial database system. Prerequisite: CS 146 (with a grade of "C-" or better); Computer Science, Applied and Computational Math, or Software Engineering majors only; or instructor consent.

**Course Objectives**

- To introduce students to the purpose of Database systems and databases, as well as common users of such systems.
- To teach students about the relational model and relation algebra.
- To teach students about design theory (such as normalization, etc.) and algorithms that help determine if a given database's tables are organized in a reasonable way.
- To teach students about real-world database system usage, architectures and components. Some example systems that might be considered are: Oracle, MySQL, Postgres, Access, DB2, and SQL Server.
- To teach students about SQL, the standard language for interacting with a database.
- To teach students how to interact with a database system from a programming language such as Java, C, PHP, Perl, etc.
- To apply industry-oriented **Google's Team Project Based Learning (PBL)** to develop a web-based database application software.

## Course Learning Outcomes (CLO)

Upon successful completion of this course, students should be able to:

- Apply theoretical knowledge and practical skills to develop database applications using DBMS and SQL language
- Effectively use the Entity Relationship Diagram for the representation of conceptual schemas.
- Identify functional dependencies and apply normalization algorithms.
- Use Data Definition Language to define database schemas.
- Construct data retrieval procedures using the Data Manipulation Language (schema, index, normalization, view, trigger, constraints). Write SQL commands to create databases, create tables, insert/update/delete/retrieve rows in a common database management system.
- Develop data retrieval procedures using Relational Algebra.
- Write simple transactions using JDBC or similar programmer interfaces in other languages.

## BS in Computer Science Program Outcomes Supported

These are the BSCS Program Outcomes supported by this course:

- An ability to apply knowledge of computing and mathematics to solve problems
- An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution
- An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs
- An ability to use current techniques, skills, and tools necessary for computing practice

## Required Texts/Readings

### Textbook

Database Systems: The Complete Book by Garcia-Molina, Ullman, and Widom

[Textbook web site: http://infolab.stanford.edu/~ullman/dscb.html](http://infolab.stanford.edu/~ullman/dscb.html)

### References

- Database System Concepts (6th edition) by Silberschatz, Korth, and Sudarsha
- Fundamentals of Database Systems (6th edition) by Elmasri and Navathe

## Course Requirements and Assignments

Success in this course is based on the expectation that students will spend, for each unit of credit, a minimum of 45 hours over the length of the course (normally three hours per unit per week) for instruction, preparation/studying, or course related activities, and so on.

### HW Assignments

You are expected to learn all of the material presented in the lectures. Written homework and project reports are also a requirement of the course. Homework and project reports must be turned in on time; **late homework and reports will NOT be accepted.** Both homework and project assignments are due at the beginning of the class period on the announced due date.

## Pop Quizzes

Unannounced quizzes may be given anytime during class. The purpose of pop quizzes is to encourage you to learn, study and review the concepts and materials we discussed in the lecture. These will generally be problems covered in the lectures. There will be proximately 6~8 pop quizzes during the semester. Each pop quiz will be scored/weighted evenly. In the end of semester, the top 80% of your pop quizzes will be selected for calculating your final score of your pop quizzes. In other words, you can drop the bottom 20% of your pop quizzes. However, **if you miss a class and a pop quiz, it counts 0 point and it cannot be dropped.** Each missing pop quiz is scored as 0 point and must be used to calculate your final score.

## Mid-Term and Final Exams

Exams will consist of questions and problems aimed at assessing student mastery of course topics. Conceptual questions may be in the form of essay or multiple-choice format. Problems will require the production of (or correction of) SQL code, data models, or similar output. All exams are closed book and note.

If you are unable to attend any one of the exams, arrangements may be made only if you have a legitimate reason. You need to inform your instructor ahead of time and have written documentation available. If you are unable to attend the exam due to illness or emergency, you also need to inform your instructor **before the exam** and bring documentation afterwards to request a make-up exam, or the points for that exam will be allocated to other exams.

## Database Design and Implementation Project

The course achieves a balance between establishing a theoretical foundation for DBMS and pragmatic applications of DBMS in a real-world environment. A significant semester-long project reinforces lectures and is designed by applying Google's Team Project Based Learning (PBL) derived from Google's software engineering best practices. The course places particular emphasis on the logical design of relational database systems. In this project, you will apply concepts presented in lectures and obtain practical, hands-on experience. Students, in randomly-selected, 3-member teams, will design and implement a small web-based database application. Team may choose any applications that are appropriate in size and complexity. Appropriateness will be determined by the instructor.

The project involves database design, modeling, creation, data population, query, and database application programming using JDBC, Java, JavaScript, JSP, XML, etc. The project includes the following activities spread over the entire semester:

- Identify key features of web-based application area for which database systems may prove beneficial,
- Determine the functionalities of the database application,
- Model the data stored in the database (identify the entities, roles, relationships, constraints, etc.),
- Design, normalize, and perfect the relational database schema,
- Write the SQL commands to create the database, find appropriate data, populate and manipulate the database, and
- Finally, and most importantly, write the software needed to embed the database system in the application.

The end result should be a functioning application that runs on the web and that uses your database to allow useful functionality.

All projects **MUST** be implemented with **MySQL** as the DBMS and all project artifacts including **programming code, meeting minutes, and report documents MUST be stored in Github (private)**. Each student must have a Github account and Github will manage and keep track of your project work. Other development tools and programming languages of your choice may be used to build the necessary user interface. Teams must be able to run their projects in class on the day of project presentations and demos.

The following deliverables for the database design and implementation project are due on specified days in the schedule (each report/document format will be provided in the class):

1. Each team must propose a web-based database application and submit a 6~8 pages long narrative “Proposal & Requirements Report”, detailing the preliminary analysis for the application, including its basic requirements. The narrative should focus on application functionality, rather than implementation details.
2. Each team must submit a data model with the requirement of minimum 10 relations for the application. The model should be sufficiently complete to serve as the basis for further development. Teams will present their data models to the class.
3. Each team must submit a database design, including tables and relationships among tables. The tables and relationships should be essentially the same as will be used in the final application. Normalization process to the level of BCNF is expected. Teams will present their database designs to the class.
4. Each team must submit the database application they develop. Teams will present their applications to the class.

It is required to provide a graphical/polished user interface and the application should provide all required functionality, including that needed to maintain data.

Better presentations will demonstrate clearly what the application does and how the team accomplished the project. Applications that do not run will receive poor marks.

Projects must be done in teams and team membership assigned will be considered fixed — no switching teams allowed.

By submitting/presenting a project, team members attest that they all participated in the conceptualization and accomplishment of the project. It is incumbent on team members to assure that **each team member MUST contribute in writing program code and documents** (Github will show each member’s contribution to each file of code and document), no one on the team “free rides” through the project. If problems arise during the term, upon consultation with team members, the instructor will remove non-participating team members from their teams. Individuals removed from teams will not receive points on the team assignment.

  - Project Management Using Github: <https://github.com/features/project-management/>
  - What is Git | What is GitHub | Git Tutorial | GitHub Tutorial | Devops Tutorial | Edureka: <https://www.youtube.com/watch?v=xuB1Id2Wxak>
  - Github Tutorial for Beginners: <https://www.youtube.com/watch?v=0fKg7e37bQE>

#### Grading Information

##### Determination of Grades

The components of the final grade will be distributed as follows:

- Class Participation: 10% (pop quizzes, pop questions, discussions, interaction with instructor, etc.)
- HW Assignments: 20% (Individual)
- Database term project: 20% (Team with peer evaluations)
- Midterm exam: 25% (Individual)
- Final exam: 25% (Individual)

Digit number grades will be assigned according to the following policy:

96 ~ 100	----	A+
92 ~ 95	----	A
90 ~ 91	----	A-
86 ~ 89	----	B+
82 ~ 85	----	B
80 ~ 81	----	B-
76 ~ 79	----	C+
72 ~ 75	----	C
70 ~ 71	----	C-
66 ~ 69	----	D+
62 ~ 65	----	D
60 ~ 61	----	D-
0 ~ 59	----	F

Each assignment, project, and exam will be scored (given points) but not assigned a letter grade. Final individual class letter grades will be assigned based on the class curve. Your final class grade can be adjusted up or down depending on your level and quality of class /project performance.

### Classroom Protocol and Other Notes

- **Absences in attending anyone of the first two lectures will be instructor-dropped out from the class.**
- Even though this is an online course, every student must attend class and participate actively. Participation doesn't mean that you just log into your class Zoom. You must sit in the front of your computer (**no cell phone**) in a private and strong internet connection environment without other people's interference.
- You will be called in most class sessions for Pop questions and to discuss material contained in lectures by using Random Roster Checker.
- **When emailing me, please always start your email subject line with "CS157A: XXXXX" to get my attention. (XXXXX: Subject, for example: CS157A:HW1 Question)**
- **Plagiarism/Cheating will not be tolerable: 'F' will be given to your FINAL COURSE GRADE and will be reported to the Department and the University. (please be noted: Obtaining HW solutions from someone or giving/showing your HW solutions to someone is also treated as Plagiarism/cheating.)**
- **Attendance is crucial to doing well on pop quizzes, assignments and examinations.**
- **Students are responsible for all materials distributed on Canvas and discussed in the class.**

Attendance: University policy F69-24 at <http://www.sjsu.edu/senate/docs/F69-24.pdf> states that students should attend all meetings of their classes, not only because they are responsible for material discussed therein, but because active participation is frequently essential to insure maximum benefit for all members of the class.

Consent for Recording of Class and Public Sharing of Instructor Material: University Policy S12-7, <http://www.sjsu.edu/senate/docs/S12-7.pdf>, requires students to obtain instructor's permission to record the course: Common courtesy and professional behavior dictate that you notify someone when you are recording him/her. You **must** obtain the instructor's permission to make audio or video recordings in this class. Such permission allows the recordings to be used for your private, study purposes only. The recordings are the intellectual property of the instructor; you have not been given any rights to reproduce or distribute the material.

Course material cannot be shared publicly without his/her approval. **You are not allowed to publicly share or upload instructor generated material for this course such as exam questions, lecture notes, or homework solutions without instructor consent.**

### University Policies

Per University Policy S16-9, university-wide policy information relevant to all courses, such as academic integrity, accommodations, etc. will be available on Office of Graduate and Undergraduate Programs' Syllabus Information web page at <http://www.sjsu.edu/gup/syllabusinfo/> Make sure to review these policies and resources.

## CS157A, Introduction to Database Management Systems, Summer 2020, Course Schedule

Tentative Course Schedule (Subject to change with fair notice.)

Week	Date	Topics, Readings, Assignments, Deadlines
1	6/2	Motivation, Orientation/Syllabus, Course Introduction (Student's Information Due) Introduction to Database Systems Concepts
1	6/4	MySQL DBMS installation, basic administration, create database and tables, Java code connecting to MySQL using JDBC <b>Project team assignment and formation, 3 students per team</b>
2	6/9	SQL Programming <b>Github account creation for team project due</b>
2	6/11	SQL Programming <b>Project Proposal &amp; Requirements Due</b> <b>HW1 Out</b>
3	6/16	JDBC, PHP, CLI, Embedded SQL Entity/Relationship Model, DTD
3	6/18	Entity/Relationship Model, SQL Data Definition, XML <b>Project Design Document Due</b> <b>HW1 Due &amp; Solutions</b>
4	6/23	Entity/Relationship Model, SQL Data Definition, XML HW2 Out Project Data Model & DB Design Document Due
4	6/25	Functional Dependencies
5	6/30	Functional Dependencies <b>HW2 Due &amp; Solutions</b>
5	7/2	<b>Midterm Exam</b>
6	7/7	Midterm Solutions Normalization, BCNF 1 <sup>st</sup> Project Code Review (revision code due in Github)
6	7/9	3 <sup>rd</sup> Normal Form Relational Algebra HW3 Out
7	7/14	Relational Algebra
7	7/16	Constraints & Triggers <b>HW3 Due &amp; Solutions</b>
8	7/21	Views and Indexes 2nd Project Code Review (revision code due in Github)

Week	Date	Topics, Readings, Assignments, Deadlines
8	7/23	Views and Indexes Transaction HW4 Out
9	7/28	Transaction
9	7/30	<b>HW4 Due &amp; Solutions</b> Final Project Presentation & Demo
10	8/4	Final Project Presentation & Demo <b>Final Project Report Due</b>
10	8/6	<b>Final Exam</b>
